

Liftable self dumping bins

Product information

The liftable self dumping bin is an excellent, extremely durable and sturdy tool for the construction industry. It is suitable for handling various building materials, such as sand, gravel, demolition waste and other loose materials. The container is equipped with an easy-to-use automatic tipping function.

The emptying process is as follows: the lifting arm is pulled back and then lifted slightly upwards, allowing the container to be tipped. The reverse movement returns the container to a horizontal position, ready for the next lifting and filling cycle.

The container is available in several different sizes and volumes. Volumes range from 200 to 8000 liters and lifting capacities from 0.4 to 16 tons.
