Hydraulical toe jacks

Product information

Hydraulic toe jacks – An effective lifting tool for heavy-duty use

Haklift hydraulic toe jacks are designed for heavy lifting and moving in industry, repair shops, and machine shops. A hydraulic toe jack enables high lifting capacities from a very low level at the tip of the jack or from the top of the jack, making it an excellent solution for lifting machines, parts, and heavy equipment safely and efficiently.

- **The hydraulic system** ensures high lifting power with little manual force and precise height adjustment.
- **Lifting points**: Lifting is possible both from the bottom of the jack and from the top, which increases the range of applications in different working environments.
- **For lifting heavy machines and equipment** — ideal for repair shops, industrial use, and other demanding applications.
- **The durable construction** ensures a long service life in heavy-duty use.
- **The painted surface** protects against corrosion and facilitates cleaning.
