

Tension meter for lashing systems

Product information

Measurement tool that allows you to easily check the tensioning force in your straps. Tension meter can measure tension forces up to 500 daN for lashings with max width 50 mm.

The industry and the society are suffering large costs each year due to poor load securing. Depending on arm strength and accessibility the tensioning force can vary up to 50% in a strap. By the help of tension meter, truck drivers are able to check the tensioning force in the straps in a quick and easy way and thereby ensure safe cargo securing.

Note: Includes calibration plate and storage bag
